2 2. Sample Description

2.1 2.1 Sample Demographics

To measure exposure to Untrustworthy Website during the 2024 election, we fielded a two-wave online survey via YouGov to 1069 participants. We also passively gathered web browsing data from those participants using YouGov’s Pulse browser plugin from October 8, 2024 to November 12, 2024 (Election Day was November 5, 2024). All participants consented to the terms of the research and were compensated by YouGov for their participation.

Of these participants, 43.0% ($n = 460$) self-reported as supporting Kamala Harris in the 2024 election while 38.9% ($n = 416$) self-reported as supporting Donald Trump. 25.4% ($n = 271$) were aged 65+, 38.1% ($n = 407$) were 45-64, 28.4% ($n = 304$) were 30-44, and 8.1% ($n = 87$) were under 30.

46.0% ($n = 492$) reported identifying as male and 54.0% ($n = 577$) reported identifying as female. 75.0% ($n = 787$) said they follow politics most or some of the time.

YouGov weighted participants to match a nationally-representative sample and we use these weights in all subsequent calculations and results.

8 7. Verasight

“In the weeks around the 2020 U.S. Presidential Election, a past study found that 26.2% of American adults visited at least one “untrustworthy” website (i.e., websites that repeatedly publish false content).

Do you think the percentage of American adults that visited at least one such website in the weeks around the 2024 U.S. Presidential Election was more, less, or the same?”

Table 41: Overall Weighted Responses to 2024 vs 2020 Untrustworthy Website Exposure Question

Response	Weighted % (95% CI)
Less	8.2%% (95% CI: [6.5%%, 9.9%%])
More	55.6%% (95% CI: [52.5%%, 58.6%%])

Response	Weighted % (95% CI)
Same	36.3%% (95% CI: [33.3%%, 39.2%%])
